Digital Literacy Project Report

Name: ANANYA

Registration No.: 25BCE10204

Branch: B.Tech

Year: First Year

Course Code: CSE0001

Date: 27/03/2026

Introduction

This project is designed to build essential digital literacy skills required for students in today's academic and professional environment. As a Student Digital Ambassador, my role is to help peers understand how to use digital tools effectively, maintain a professional online presence, and communicate responsibly. Through this project, I explored various platforms such as GitHub, LinkedIn, and Google Workspace while also learning about email etiquette and cyber safety. Each task focused on a different aspect of digital literacy, helping me develop practical skills that will be useful throughout my college journey and future career.

Task 1: Digital Literacy Awareness Infographic

For this task, I created a digital literacy awareness infographic using Canva, which is an easy-to-use online design tool. The infographic focuses on key topics such as the meaning of digital literacy, safe internet practices, and the importance of maintaining a professional online presence. I included examples of commonly used digital tools like Google Docs, GitHub, and LinkedIn to help students understand how these platforms can support their academic and career growth. I used simple language, icons, and color combinations to make the design visually appealing and easy to understand for my peers.

One interesting aspect of this task was learning how to present information in a concise and visually engaging manner. Instead of writing long paragraphs, I had to summarize ideas into short points without losing meaning. However, I found it slightly challenging to balance design and content, as adding too much information made the infographic look cluttered. Overall, this task improved my creativity and helped me understand how visual communication plays an important role in spreading awareness effectively.

.

Task 2: Student Digital Portfolio

For this task, I created my student digital portfolio by setting up profiles on GitHub, LinkedIn, and Hacker Rank. Each platform serves a different purpose in building a strong professional presence. GitHub is mainly used to showcase coding projects and manage repositories, making it an essential

platform for developers. LinkedIn is a professional *networking site where I added my education details, including my degree, institution, and expected graduation year, to begin building my professional identity. HackerRank is a coding practice platform that helps improve problem-solving and programming skills through various challenges.*

I also created a GitHub profile README, where I included my name, branch, year, and a short statement about my learning goals. Over the next four years, I plan to actively use these platforms to upload projects, participate in coding challenges, and connect with professionals in my field. This task helped me understand the importance of maintaining a professional digital presence from an early stage and how it can support internship and career opportunities in the future.

Task 3: Coding & Collaboration Platforms

In this task, I explored both coding practice platforms and collaboration tools that are useful for students. For the coding part, I created an account on HackerRank and completed a beginner-level challenge. This helped me understand basic programming concepts and improve my logical thinking. Solving even a simple problem gave me confidence and motivated me to practice more regularly. Platforms like HackerRank are very helpful for building problem-solving skills and preparing for technical interviews.

For the collaboration part, I created a Google Form titled "Digital Literacy Awareness Quiz" with five questions, including both multiple-choice and short-answer types. This form can be used to test students' understanding of digital literacy concepts. I also viewed the responses in Google Sheets, which made it easy to organize and analyze the data. These tools are very useful in academic settings for conducting surveys, quizzes, and collecting feedback. Overall, this task helped me understand how online platforms can support both individual learning and group collaboration effectively.

Task 4: Email Etiquette & Communication

Poor digital communication can often create misunderstandings in academic and professional environments. For example, a student sending an email

without a proper *subject line, greeting, or clear message may appear unprofessional, and the professor might ignore or misunderstand the request. In some cases, incomplete information or an informal tone can delay responses or create confusion. This situation can be avoided by following proper email etiquette, such as writing a clear and relevant subject line, using a polite and respectful tone, and organizing the email into a structured format with a greeting, body, and closing.*

Through this task, I learned the importance of effective communication and how small details in an email can make a big difference. Writing professional emails not only ensures clarity but also creates a positive impression in academic and professional interactions.

Task 5: Cybercrime Awareness

While researching cybercrime, I was surprised to learn how common online payment fraud and phishing attacks are, especially among students. Many people unknowingly click on fake links or share sensitive information like OTPs, which can lead to financial loss. What shocked me most is how realistic these scams appear, making them difficult to identify at first glance. This made me realize that even a small mistake can have serious consequences.

As a result of this task, one habit I will change is being more cautious while handling online transactions and messages. I will always verify links, avoid sharing personal details, and double-check payment requests before taking any action. This task increased my awareness of cyber threats and encouraged me to adopt safer online practices in my daily life.

Conclusion

This project helped me develop a strong understanding of digital literacy and its importance in both academic and professional life. I learned how to use digital tools effectively, build a professional online presence, communicate properly through emails, and stay safe from cyber threats. Each task provided practical experience that will be useful in my future studies and

career. Overall, this project enhanced my confidence in using digital platforms responsibly and efficiently.
